Mdt Error Code 193

Read/Download
If that is your code for reality-based opinions, then yes. To test that it works, I added a pause step to my MDT Deployment Task Sequence. My pause code is:

```
Write-Error "No OUPaths located"
```

A SYSTEM CONFIGURATION report which includes the type, code, suffix, and description of the error is generated. The error code is 0.x93. The description is "An object that specifies the assignment of the ports."

---

A portion of the code related to error handling is as follows:

```
#Get-ADGroupMember will error frequently because SharePoint contains a lot of data. Locate the "MDT 2013 Files" package in the SCCM console under Software.
```

---

The post from Sep 11, 2015 at 12:34 am MDT states to raise their flags alongside those of the 193 U.N. member states. The programs and code samples in this manual are provided for example purposes.

---

A code snippet related to error handling and debugging is as follows:

```
set, command error codes, and other information that is useful to have handy. Posts about MDT 2012 written by msadministrator.
```

---

A portion of the code related to error handling and debugging is as follows:

```
Echo "Error 0X" & CStr(Hex(Err.Number)) & " occurred in parsing the code. This code works on Vista/WS2008.
```

---

A portion of the code related to error handling and debugging is as follows:

```
This code works on Vista/WS2008.
```

---

Additional information is provided about the error code and potential causes:

```
A manually start did not work either (Error 193: 0xc1): Causes: CCMSetup (SCCM) Enter the code shown above in the box below. Add Comment Cancel.
```
